15-19 June 2009– Commissioning of the TYD Oil Purifying Machine

JM Ecotech Solutions Co has recently commissioned the **TYD Series Oil Purifier Machine**, a new addition to its Oil Treatment Facility. The machine is specially designed for removing high water content in oil. It is also very effective in removing other particulates, residuals and impurities in oils such as bio-diesel, bunker oil from ship vessels, lubricant oil series as well as light oil series.

Actual commissioning was done by a Chinese national, Engr. Wei Zuo of the **Chongqing Qianneng Industry (Group) Co Ltd**, with our team of local engineers and technical crew.

This project is part of **Ecotech's** plan to expand operations and accommodate larger volumes of oil to serve the demand of the market.

Ecotech supports the call for sustainable development thru preservation of our natural resources by way of promoting oil recycling for reuse.
