

LLDA VISIT 2012

The Laguna Lake Development Authority (LLDA) conducted its week-long Pollution Control Officer Training/Seminar last March 19-23, 2012. The training program included the exposure of the participants to an industrial setting, and JM Ecotech Solutions Co. was selected as the facilitator for the said event that was held on the last day of the training.

The company welcomed the participants of the LLDA training with joyful smiles on the date of the activity. Representatives of the departments of the company introduced the participants to their respective sections to give them a grasp of the technologies utilized by the company. They also entertained and answered questions raised by the participants on the company processes and water quality monitoring.

The Laguna Lake Development Authority is a quasi-government organization that is attached to the Department of Environment and Natural Resources (DENR) and is tasked with the preservation, development and sustainability of the Laguna de Bay and its tributaries. Regulatory and law-enforcement functions are carried out with provisions on environmental management, particularly on water quality monitoring, conservation of natural resources, and community-based natural resource management. In order to achieve this, the LLDA offers training courses for the accreditation of Pollution Control Officers in all developmental and productive economic activities within the Laguna de Bay Region.
